Sample Learning Schedule

One of the great benefits of online training is that it's self-paced! However, learning is more effective if you set learning goals. Below, we've created a sample training schedule that will allow you to go through the content at a reasonable pace. Your schedule may be different, but don't spread out your learning too much as it may be more challenging to recall concepts that you learned early on. If you're looking for more, the optional courses in the learning path are highly recommended for a well-rounded picture of Appian development.
